SERVICENOW MATERIAL · 10 MORE FOR 28

28 used 20. Receive 10 on 29 and send those 10 to 28

Use the live names on your site (**Alhamis__28** / Alhamis_28 and **Alhamis__29** / Alhamis_29). Item **Servicenow 011**. Needs synarete_wms **v0.1.61**. HTT is not used. Both work orders must still be **Open** (not Completed).

> **The first 10 cannot come back**
> 28 received 30, gave 10 to 29, and used the leftover 20. Those 10 were already consumed on 29. You cannot interchange consumed qty. 29 must **Receive 10 new** from the warehouse, then Issue them to 28. 28 does **not** warehouse-Receive this 10.

Where you are now (already done)

Field	28 now	29 now	Meaning
Qty Received	30	0	Only 28 received from warehouse the first time
Qty Interchanged Out	10	0 or 10	28 lent 10. 29 may have sent/consumed them
Qty Interchanged In	0	10	29 held the first 10
Qty Issued	20	10	28 issued the leftover 20 to itself
Qty Consumed	20	10	Both sides already used what they had
Qty Remaining	0	0	Nothing left to send until 29 receives again
Warehouse remaining	0	0	Empty until 29 receives 10 new

Quantity story from here

After this step	29 warehouse	29 remaining	28 remaining	28 consumed
Start (job already used 20)	0	0	0	20
1. 29 receives 10 new	10	0	0	20
2. 29 sends 10 to 28	0	0	10	20
3. 28 consumes the 10	0	0	0	30

End: 28 requested 30 and used 30 (20 first + 10 replenished). 29 received 10 and sent them on. 29 does not consume this 10.

Step 1 — Confirm 28 and 29 are Open

- Open **Alhamis__28**. Status must be Open. Consumed = 20, Remaining = 0. If figures look stale: Material → Recalculate Quantities.
- Open **Alhamis__29**. Status must be Open. Remaining = 0, Warehouse Remaining = 0. Recalculate if needed.
- If either is Completed, you cannot Issue to it. Do not Complete until after step 3.

Step 2 — Receive 10 on 29 only

- Open **29** → Material → **Receive Material**.
- Item **Servicenow 011**, qty **10**. Save → Submit.
- 29: Qty Received = 10, Warehouse Remaining = 10, Issued still 0.
- Do **not** Receive 10 on 28. 28 already received 30 the first time.

Expected: Main Warehouse stock drops by 10 only if this receive is from company/MP warehouse stock. SNWO receive itself does not change 28.

Step 3 — 29 brings 10 to 28 (this is 28 getting the 10)

- Stay on **29** → Material → **Issue Material**.
- Original = **29**. Received For = **29**. **Issued To = 28**.
- Qty = **10**. Reason required, e.g. *Replenish 10 to Alhamis__28 (first 10 already consumed).*
- MP Stock = **No**. Save (type becomes Interchange) → Submit.
- 29: Warehouse Remaining = 0, Interchanged Out increased by 10.
- Open **28**: Interchanged In = 10, Remaining on site = **10**. Qty Received still 30. Do not Receive again.

Do not consume on 29. This 10 is for 28.

If Issue fails
29 warehouse remaining is still 0 — Receive 10 did not submit. Issued To must be 28, Original must be 29. 28 must be Open. You cannot send the old consumed 10; only the new Receive.

Step 4 — 28 uses the 10 (original 30 matches)

- Open **28**. Remaining should be 10. Consumed already 20. Warehouse Remaining still 0.
- Material → **Consume Material**, qty **10**. Submit. (Interchanged In is already issued — no Issue-to-self on 28.)
- 28: Consumed = 30, Remaining = 0. Requested 30 matches used 30.
- Optional: Recalculate Quantities to confirm. Then Reconcile (sign-off only) and Complete 28 and 29.

Short click path

1. Confirm 28 and 29 are **Open**. Recalculate if numbers look old.
2. **29** → Receive Material → qty **10** → Submit.
3. **29** → Issue Material → Issued To = **28**, qty 10, reason → Submit.
4. **28** → Consume Material → qty **10** → Submit. Consumed 30 = requested 30.

Do not

Wrong	Do this instead
Receive 10 on 28	Only Receive on 29. 28 gets Interchanged In
Try to return the first 10 from 29	Those 10 are already consumed. Receive 10 new on 29
Consume the 10 on 29	Issue them to 28, then Consume on 28
Issue 10 to 29 itself then stop	Issued To must be 28 so 28 can consume
Complete 28 before the 10 arrives	Keep both Open until 28 has consumed 30

Recalculate Quantities only refreshes the numbers. It is not a receive/issue/consume step.
